Air Source for air table/track

The new designed variable speed Air Source for Linear Air Tracks and Air Tables. This compact and attractive mains operated air blower has adjustable speed so the amount of air can be controlled to suit requirements. If the blower is running slower, it also runs quieter. Many schools are still using the 'blow end' of a noisy vacuum cleaner. The air is drawn from the upper face below the carry handle so rubbish from the floor is not sucked in. A strainer stops unwanted particles from being sucked in and another strainer stops particles from being dropped into the outlet orifice. Supplied complete with flexible hose.

***Standard packing: Paper box**
