

Sliding Rheostat- Overview

We supply a comprehensive range of rheostats offering excellent value for money. They are wound with heavily oxidised resistance wire on a vitreous enamelled tube with the winding secured in place with a ceramic cement. The tube is supported on robust diecast end stands and the heavy duty sliding contact is of the multi-leaf phosphor bronze type, nickel-plated for corrosion resistance. 4mm terminal posts are fitted, facilitating external connection by conventional 4mm plug leads, spade terminals or bare-ended leads.

supplied in a paper box and with complete instructions.

Code	Range
PHM-R52908	5 Ohm, 2.3A
PHM-R52907	11 Ohm, 5A
PHM-R50155	20 Ohm, 4.5A
PHM-R50111	270 Ohm, 1A

*Standard packing: paper box
